I have a dataframe that looks like: a b c 1 NA NA NA 2 NA 2 3 3 2 2 3 I want to subset the rows and columns using row and column numbers, with the following condition: when the row or column value is equal to 2, there is only one 3 in the cell, and it is ignored when it's NA. In this example, I would only have the first 2 rows, and the cell NA is ignored. a b c 1 NA NA NA 2 NA 2 3 3 2 2 3 I have tried the following, but it seems that it will still select NA, which I don't want. df_subset ca3bfb1094
