Towerfall: a game of cat-and-mouse, of survival and starvation. You're a burglar that got trapped in a tower full of treasures. You can choose from 60 different characters and more than 30 unlockable costumes. As they say 'everything goes' as soon as the door opens: with you in your possession are everything you need to survive! Puzzle mini games and challenging enemies. Use your tools, traps and locks to solve the puzzles. Use your cunning and your background to survive. Use the environment to your advantage. As much action as you want. Not only will you need to fight for your life, you will also need to carefully choose the best equipment for your next mission. Play stealthily with the thief's cloak and a rag to pick the lock. Use weapons, such as the wrench or the heavy hammer, to take down your enemies. Use heavy equipment, such as the monster truck or the steam roller to destroy your enemies. Use cars, bikes or any other machines you come across to speed up your escape. Loot as much as you can before the alarm goes off and the guards come running. The possibilities are endless: the only limit is your imagination. Carry out a great heist or... leave, in a hurry, dressed as a dog. - Explore your surroundings and find items - A room, is a big object. Empty rooms contain less items. - Collect as much money as you can - You always need money. Go to a room where money is stored. Pick up everything and bring it back home. - Get out of the tower - - Need to repair your lock? Use your tools to open any locked room! - Break a lock, by choosing a tool. Use the heavy hammer

to break a lock. Choose the wrench to pick locks. You can also use a lockpick to open a lock. - Just wait for someone to come inside - - Kick the door open and go in - - You might need to 'hide' - Don't you want someone to see the door open? Move the door away from the wall and hide it with the step ladder. - You have to escape: the alarm goes off! - - Where is the safest place to escape? - - Choose a weapon and start fighting! - - After opening the door, who was on the other side? - - In which direction will you escape? - - Take down

I would check though if the memory is set properly in BIOS (your answer below says "default settings are never right"). Good idea, after finding a manual I found the setting at

this "Motherboard configuration" tab: Re: Not enough memory! Thanks, finally I found it! Anyway I tried to install now the Ram that is coming out and it looks like it doesn't work, so maybe it is the pair or the module that don't come in good condition. Maybe will take the same as it came out but just 4GB. Re: Not enough memory! I got my 2GB to work correctly. Here I show you what I did: From the BIOS I click to the advanced tab and set the memory to "Advanced Configuration and Power Interface (ACPI)". I then got a 16 GB memory and it goes like this: Boot it up. I got the 2 GB back then. (yes, I checked if it was set as "Advanced Configuration and Power Interface (ACPI)") So what I did was, for the motherboard, I don't have the manual for my motherboard, but when I look in the manual for my motherboard, I see "Read to initialize PC settings" at the end. So I reset it to do that. Then it booted up to POST. I then read the manual for the memory and you said that the read command takes time. So I let it be, on "Read to initialize PC settings
