It's not often that I find something that I want to share with the community. Recently, I stumbled upon a website that is presenting their feedback collection tool, and I immediately thought of how useful it would be for our community. And since a tool is nothing without users using it, I decided to give it a try. If you want to put a pinch of lime in your life with this tool, read on! A little bit about me: I'm a developer in the web industry for the past 15 years. I decided to transition to another technology and managed to work in this industry for 5 years. However, I believe the best is yet to come! I'm a front end developer who loves to try new frameworks, languages, and

---

practices. This is the part of my life that I can definitely share with others, and I really like when I come across something innovative. Here's my feedback collection tool: Users You can find other users' feedbacks by following their social media feeds or by clicking their profiles. Updates Users can send you their feedbacks via email or via the form on the website. Categories You can categorize your feedbacks into the following categories: Benefits of the tool It is a great way to introduce yourself to others. You can share your project or your company's history in the form of feedbacks. Lots of people have shared their feedbacks. If you plan on releasing your product, you can look for a user who might have experience with that product and use his/her feedbacks to improve your product. I believe that you should always try to make a difference in the community in whatever way you can. Community You can find a community's feedbacks or a user's comments by

XCTestCase-Sketch is a small and useful application, which allows you to compare two sets of images, both of which consist of multiple lines and dots. Apple has announced that it is bringing back the headphone jack to its latest iPhones and iPads. However, they are not going to be including a standard 3.5mm jack to all of their customers. Instead, the company is going to be including a headphone jack, Lightning connector, and proprietary docking connector on their phones. That can be a problem since users are accustomed to plugging headphones into their iPhone and not having to worry about a docking connector. That headphone jack will also be missing from Apple's 4th generation iPod Nano. Many people are expressing anger over Apple's decision to cut the headphone jack from its phones and other devices. However, some people believe that removing the standard 3.5mm headphone jack will also be a benefit for consumers. That reasoning is based on the fact that Lightning port is pretty much

universally used on iDevices. Apple is a company that doesn't like to give any reason for why it makes a decision on a new design. So, it's likely that we won't know why the company decided to remove the standard 3.5mm headphone jack from its devices until it's too late. However, one thing is for sure. The headphone jack is probably going to be a permanent feature that will be in Apple's products, no matter what. Major brands of waterlogged watches are allowed to pay retailers as much as 50 percent more than the actual cost of the goods to avoid import tariffs.
