A: LEGO MINDSTORMS NXT 2.2 Modeler and Creator 2.2 is a premium product, with a price tag of about \$200. It provides the functionality that you seek out of LEGO MINDSTORMS, and will even make better-looking constructions than LPub3D. Although the price of LPub3D is certainly cheaper than LEGO MINDSTORMS NXT 2.2 Modeler and Creator 2.2, I suggest you try it out first, in case you are unhappy with it, it is not difficult to return it (although it might be expensive to return). Good thing is that I am paid fairly and that I'm not an unemployed indigent. In this post, I want to discuss corporate taxes, and in particular, the benefits of the federal corporate income tax. Q: accessing a variable from a different window I am using Java and the scene graph. I am using a JFrame with a JPanel to display some information. When I load the JFrame, I create a variable called data. When I close the JFrame, I want to set the data value to null. The problem is that when I run the program, I get a NPE. I am assuming this is because data is an instance variable. How can I make the data variable persistent in the sense that I can still access the same instance? Here is the JFrame creation and closing:

```
public class Main extends JFrame{ data = new Sound(); private JPanel content; public Main(){ super("ChillWave Station");
```

```
setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE); setSize(1360,  
700); setLocationRelativeTo(null); setV 3a67dffeec
