My touch device keeps telling me I have low memory but I never have. I know it's possible that somebody took my phone without my knowledge or that there's something wrong with the phone, but I've been checking on it, and I see no signs. What might be the problem and is there anything I can do to fix it without buying a new phone? A: The fix is simple. Go to settings>about device>memory>check memory usage and try to get the Memory usage to 0. Also, it would help if you could provide more information about your device. If you're not familiar with the process, here is a quick video about how to do it. Q: Connecting a sensor to TFT screen using ATmega8 I'm trying to connect a transistor to a TFT screen. The screen uses a bitmap where each pixel is represented by a set of 8 bits. My problem is I can't get 8-bit of data to display properly. When I use the analog pins to connect to the tft it shows the whole screen as a single pixel. When I use the i2c 0 on the PC everything is ok. Here is the code for I2C: #define STATUS_PIN 12 #define SCL_SDA_PIN 11 #define LCD_PINS 8,9,10,14,15 #define LCD_RESET 4 #define MIN_TIME_BETWEEN_SCAN 1000 #define SCL_SLOW FastPWM_Config_FAST_CYCLES const uint8_t Reset_Line = 0; //Example of a bitmap const uint8_t map_data[64] = { 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x02, 0x

) Root.getValue(); //This method takes a single integer I have searched stackoverflow as well as google but I have found nothing. I tried to convert this'single integer' to a String and it works fine, but I am not allowed to post images yet. Edit: Seems that Cucumber used a different

method. Manually changing the getValue() to getIntValue() changes the result to 0. It works when a String is passed to this method. A: This is a (I think) Javascript Interpreter problem. The interpreter (cucumber) is decoding the integer as a String, then it interprets the String as an Integer. It should be able to parse the string '0' as a valid

When I do, the JScrollPane disappears. Here is the code: JPanel jp = new JPanel(); JPanel outside = new JPanel(new BorderLayout()); JPanel panel = new JPanel(new GridLayout(5,1,1,5)); JScrollPane scroll = new JScrollPane(panel,JScrollPane.VERTICAL_SCROLLBAR_AS_NEEDED,JScrollPane.HORIZONTAL_SCROLLBAR_AS_NEEDED); outside.add(scroll); jp.add(outside); frame.add(jp); frame.setSize(300, 300); So, the scrollPane appears, but when I resize the frame, the scrollPane disappears. How can I make it appear when the frame resizes? A: The scrollpane will not appear when the size of the JFrame changes. This is because the JFrame isnt using the resize component of the frame. Instead of this frame.setSize(300, 300); you should instead have: frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

Batman Forever (1995) - Official Trailer Theatrical release: 1994 Directed by: Joel Schumacher Produced by: Joel Schumacher, Chris McGurk Story by: Tim Burton, Danny DeVito, Michael France, Kevin Smith Screenplay by: Michael France The fourth film in the Batman franchise. A sequel to Batman Returns, it takes place one year later, with Batman attempting to stop a mysterious man named Max Shreck, who has resurrected the undead body of the Joker. Bruce Wayne attempts to walk a line between keeping the relationship with Selina Kyle as hot as it was in the original film, while also hiding his identity and protecting

Selina, as well as the apparent return of Catwoman, who, after having been presumed dead, reappears in the police line-up during the Joker's trial. Release, the film received mostly positive reviews from critics and placed number one at the box office and earned $115 million USD in North America, setting a new record for the series.[8] A sequel was planned for release in 1997, but in the summer of 1996 Schumacher was charged with sexual harassment by his former production assistant.[9] As a result of the
