The Jellyfish is one of the most beautiful creatures of the sea. All the jellyfishes are made of one cell that contains water and a jelly-like substance. Each cell is the size of a pinhead. There are six types of jellyfish living in the sea. Depending on their different types, they have different names. The Jellies are also called "Mimic Cephalopods" because they are similar to a squid or octopus. They can sting if they feel that they are being attacked. They inject their stinging cells through their tentacles to protect themselves. They are able to swim freely because of the jelly-like cells. Jellyfishes can regenerate the tentacles they lose. They are also able to change color by changing their cell color. These are some of the best features of the jellyfish. If you want to have a better overview of the jellyfish, just download Jellyfish Screensaver and enjoy!
