Re: Stacks allows for true working separation of files under different "stack" projects, making organization significantly easier "to keep track of projects, contain them, and minimize redundancy." This is fairly obvious, especially if you organize your work on a project basis. Yet, it takes a bit of thinking up on your own before you come up with that kind of "innovation" (which was actually quite simple to implement). Re: Stacks makes stacking incredibly easy in Photoshop, and with the addition of Re: Stacks extensions for The Adobe Creative Cloud, you can go even further, such as being able to apply an entirely custom set of online actions to every file imported into a "stack" project to create highly customizable roundups consisting of hundreds of galleries. In some very simplistic terms, this is all about "Making it Easy to Review with Photoshop." First, the organization of files into stacks: it's very easy to separate files into different folders according to the categories you've created beforehand. An example of a piece of work that I would use this for would be a series of photographs for an ad campaign. I could create a group of related Photoshop files on a single folder and then add a further sub-folder to that group for each of the related sets of photographs I need to assess. For instance, I might create a folder for Fashion, one for Mobile, one for TV/Videos, one for Product, one for Photography, one for Formatting/Design, one for Retouching and, perhaps, one for Images that will be used to create the original campaign. Each group could then have a list of sub-folders for each of the sets of set up for the ad campaign. It sounds good at first, until you start to think about the amount of files that need to be reviewed in a more detailed way. Getting deeper into it, I would probably create even more folders within each of the main folders. When it comes to Photoshop's Organizer I have to struggle to make sense of things. An example of a viable workflow for me would be to make another folder for tools I use the most and put those tools into sub-folders underneath it. The problem with using the Creative Cloud Folders, however, is that I don't really know what belongs where. For instance, for me, "Layer Comps" is in a "Tools" folder because I use that sub-folder almost exclusively for organizing and isolating layers in Photoshop. As a keen photoshop user… I should be able to move Photoshop's Organizer into Photoshop and immediately sort out how everything is structured. Unfortunately, the process is too complicated to know what is going on in the Organizer, so I tend to avoid it and find other methods to use instead. I want to like the new Creative Cloud Folders interface, but I am pretty certain that the way things are organized is less important than they could be. I am sure I am not the only one that doesn't understand exactly what is going on in the new interface and what is an appropriate place for it. In my experience, most people who are overwhelmed by the Organizer tend to blame it on "not understanding technology." Is it just me, or are Photoshop's designers taking a step backwards with this feature?
