I started using Linux in 2003 with Mandrake Linux, which I still use. Now I have moved to Ubuntu Linux and it is working well for me, although I am not a huge fan of Unity. Every photo editor should have smart, automatic tools for eliminating noise and adjusting sharpness, both of which are crucial to getting a finished product that looks good. Or, if you need to make these adjustments on your own, for whatever reason, the adjustment sliders are a little too subtle, so you either have to bump up the values a lot or simply do it by eye. With that said, this adjustment tool is very well built, from easily searchable, clearly labeled adjustment controls to the ability to determine a slider's minimum and maximum values. The latter is helpful for making sure you aren't making the image too sharp or too soft. The Pen tool is a set of tools that allow you to create and edit fluid, stylized lines that offer such varied effects as a vector-style straight line, text, beveled edges, and even a brush. The Healing Brush is precisely what it sounds like. It uses vanishing point technology to seamlessly fill in small holes. The Smart Brush features convenient real-time control over your brush's settings. With the brush and guide tools and a history palette, you can draft on existing images to retouch them or provide pre-drawn areas to work on. The History palette shows changes that you've made over the last few versions of your image. This allows you to see a live progress bar on the bottom of the image as you select different tools to apply. The History palette also shows you which tools have been used the most, so you can optimize your work by using them most frequently. The Move Tool has an absolute X, Y position, so you can move the image to a new location. Since you're working in Photoshop, you can use the selection tools to create and edit selection areas and isolate them to give you the most refined control over your image. The Clear Stamp is like the Magic Wand, but it has much more control. You can set the clearing to remove areas of color, or defaults to removing spots of black or white. In addition, the thumbnail lets you see where the brush will eliminate areas. The Stamp tool also blends local surroundings with your selection area to make it look more natural. 933d7f57e6

Unsharp mask also takes advantage of the Blur Motion Blur feature which can be found on most point and shoot cameras. Resize the layer as you wish. I suggested the original size was 1280x960 for the tag image. In order to adjust the Blur, I selected the Blur Ring (Black & White) tool. Select an aperture and adjust the blur option using the right arrow button at the bottom of the screen. If the background is slightly blurry due to the aperture, use the Left Arrow button to adjust. With the sharpness contrast set to 50, reduce the intensity using the star in the Fill section of the Layers panel. Next, change the solid black and white to a darker shade. I ended up with about 40. I move the layer blend into the Sharpened section of the Adjustments panel.
