Blend modes run the range of Transparency, Lighten, Multiply, Screen, Overlay, Darken, Soft Light, Hue, Saturation, Color, Color Burn, Color Dodge, and Color Erase. Transparency allows the texture of your image to remain visible while changing its color. So, if you wanted to change a subject's eyes from blue to brown with the background being mostly black, you would achieve that by using transparency. Next, there are lighten blend modes that shift the overall tone of your image, also known as "shifting the light" or "adding light." Some examples of this mode include Open Air, Negative Open, Adjusted Open, and Artistic Cut. The multiply blend mode increases the shades of your image and fill the darker and lighter areas. This mode includes Darken, Multiply, and Multiply Plus. The Overlay blend mode blends the top image layers with the bottom layers of another image. Here are some examples of finishes that can be achieved by using the blend mode: - The Golden Filter effect smooths, smoothes, and blurs the edges of your photo - The Pearl Filter effect adds a faded, pearlized, and metallic look - The Bevel Filter adds a subtle textured look - The Grainy Film effect adds a film grain look - The Vignette effect dramatically darkens the top and bottom corners of your photo and adds extra contrast - The Black-and-White effect achieves a clean, flat look without affecting the color balance of the image - The Color Burn blend mode removes colors from the lower layers and adds the color to the top layer - The Color Dodge blend mode brightens the colors in the top layers and lightens or blurs the colors in the lower layers - The Color Erase blend mode removes all the colors from the top image layer and applies them to the lower image layers.
