It is a feature-rich software that helps you generate more than 200 types of complex passwords. The application can be used by anyone, in any country and to protect your website and applications from hackers. The program generates random passwords of different lengths, and generates each entry using a combination of characters from any selected alphabet. The resulting password is then encrypted using the Blowfish algorithm, which is widely considered to be the best among existing ciphers. Additionally, it is possible to set a maximum length for each password, plus specify a minimum number of digits, upper and lower case characters, spaces and punctuation symbols. You can also enter a restriction for password length, and set the number of generated password combinations. Of course, to protect your information from intruders, the software can also use a secret key that is never written on a hard drive. It is also worth noting that the program is very easy to use, displaying all necessary information on the main window. However, the application does not support the use of the Open Directory, and does not permit you to view the generated passwords. Advanced Password Generator is a free application that has been tested by our experts. You can get the full version of the program from the official website, with a detailed description of all features and the minimum requirements. A.
