Not only did they push the limits of screen real-estate on the Mac Pro, they also deliver an entirely new interface for all of the cataloging and tracking that's involved in photography. In some ways, it feels a lot like using Photoshop for iOS. It's intuitive and easy. Lightroom CC is a powerful photography program that serves as a superb tool for organizing and editing your photos. In addition to strong photo editing tools, Lightroom CC makes it easy to create a custom catalog based on a searchable database, set up your images for easy browsing on a large monitor, easily move and share images. Photoshop CC is a powerhouse in photo editing, and it comes with all the photo files you need immediately. Use your iPad as a scanner, or even as a camera. You'll even get the raw files back that can be used to edit them on the Mac. It's pretty simple: With every new version of the application Adobe updates all plugins, stabilizers, highlighter, healing tool, print size and color. So you can now edit a photo or video and it's ready to be uploaded to social media. I first started using Lightroom in version 3 on my Android-tablet. After a few years, with the Android version of Photoshop, I was ready for a change. Don't get me wrong, I'm clearly not a hard-core Photoshop user, but I do like how I can quickly edit images without having to spend hours to do the same with Photoshop. This makes the Android version ideal for me. I soon started using the same Lightroom on my desktop. That "desktop" was a Mac running OS X. When version 4 came out, and after a year of using Lightroom 4, I became a Lightroom 4 fan. I also started using Photoshop elements, not even Photoshop proper, just Adobe elements, and burning DVDs. I liked how something that was "only" $99 could quickly do the things I needed to do, with editing, and burn a DVD to watch in my TV. So, why not Photoshop? I loved how you could quickly cut, copy, paste, and do other things by "dragging". It worked very quickly and easily. This led me to other photo programs like ACDSee, FotoMagico, DigiNikon, and so on. After a few years of using other photo apps in addition to Photoshop, I felt like I needed to learn Photoshop properly. It was frustrating. It was clear that Adobe wasn't interested in teaching me the basic skills--you know, like how to use a command line, save your edits, and so on--that would help me use Photoshop. I thought, I'll avoid Adobe Photoshop and stick to my package of free programs (I was a heavy user at that time), which was also made up of non-Adobe software.
