The libraries are intended to support the COSIL framework. In order to easily compile COSIL applications in.NET, some functionalities are provided for the tool-chain process, including a COM wrapper for the COSIL compiler, and a component of the COSIL compiler that generates the object code. In addition, the library includes the CosilNet Interoperability library that provides interoperability with Java applications. REQUIRED COSIL INFORMATION: The required COSIL information is included in the documentation. But, also, there is a separate section describing the COSIL information. Using the libraries: The libraries are designed to be used directly from the provided Assembly. CosiNet Runtime: You can use the libraries directly from the COSIL framework. You do not need to open a Command Prompt window, but you can run COSIL applications directly. Here you can find a sample application that demonstrates how the libraries are used: Download the latest version here: Link to GitHub Efficacy and safety of loprazolam in children with anxiety disorders: results of a 5-week, double-blind, placebo-controlled study. Loprazolam is an anxiolytic agent that may be used in the treatment of anxiety disorders in children and adolescents. It has a rapid onset, and thus may be useful in reducing acute anxiety. The efficacy and safety of loprazolam were evaluated in a 5-week, double-blind, placebo-controlled trial in children and adolescents with primary anxiety disorders. Ninety-eight children and adolescents, aged 6 to 17 years, were randomized to receive once daily loprazolam 0.1, 0.5, 1, or 2 mg, or placebo. Patients in the 1- and 2-mg groups received 2 and 4 mg doses, respectively, to account for the pharmacokinetic properties of loprazolam. The primary efficacy measure was the Clinician's Anxiety Scale, a 21-item measure of anxiety symptoms that was completed at baseline and once weekly throughout the 5-week trial. Of the 99 patients enrolled, 86 completed the study. Efficacy results showed that both loprazolam doses were significantly superior to placebo on the Clinician's Anxiety Scale throughout the 5-week study. Specifically, both doses showed significantly greater reduction from baseline at day 28 than did placebo. Safety results showed that the frequency of adverse events was similar across all treatment groups
