Step 2: Select A Video Filter Next, you'll need to locate the video filter that you want to use. You can do this by going to the App store on your iPhone or iPad and searching for video filters. Alternatively, you can download video filters from the internet, depending on whether you have a Mac, Windows PC or a Linux OS.

Step 3: Enhance Video After downloading your video filter of choice, open the app and select an option that works for your video-editing needs. You might also want to try some of the presets to get an idea of how the filter looks like.

Step 4: Share If you're finished enhancing your video, you can now share it to your favorite social media account, or you can also edit it further if you want to improve it further.
