There is a big difference between sprinkler and drip irrigation systems. Sprinkler systems use a sprinkler head to direct the water in a specific area, while drip systems use a receiver to emit the water from a hose. The difference between the two types of irrigation systems is so noticeable that it can be easily seen in the first few moments of the gardener. And of course you can't miss the S shape line of the drip hoses. But the question is: "Is there a difference between sprinkler and drip irrigation systems?" The differences are too important to ignore. First, let's take a look at the benefits of each system.

Hi Niklas,

Yes, I agree that Adobe Photoshop has some excellent tutorials out there. There is also a good travel hack on Wylicism for working in Photoshop. The 'Photoshops' forum is a great place if you are looking for support. Hey Tom!

I think beginners will appreciate Lightroom with the new updates. I have my son constantly using it so that he can learn how to do basic photo editing. (He has taken basic photos)

I have also been using it as a great work flow for creating a mockup and creating a print layout for my web design clients.

Here are a some resources for beginners:

<http://www.lessismore.net/how-to-learn-lightroom.html#twilight-for-beginners>

<https://owl.phy.ornl.gov/owl/abasics.html> .

I hope this helps.

PS: I am now using Lightroom 5.1 and wanted to test the cloud connectivity. I believe it may work now.

Best regards,

German Karim It didn't really take all that long for Darktable 1.0's new tracking option to be integrated into the editor. It actually fits right in where you would expect the feature to lie - a horizontal toolbar. I don't think that will be a problem for the version that comes to the public in the future. The plugin has come a long way and hopefully it will get even better by the time 1.2 is out. Some of the filters built in to Darktable are pretty cool, but I really don't have much use for them myself. I am working with RAW files, so I'm more interested in a good library with support for RawSight. On a related note, Darktable can import titles and tags from the Raw preferences, and I'm not yet sure where that feature means that the information will show up and how it can be accessed. But I'm dealing with a lot of DNG data these days, and that means using a lot of different RAW file types.

Microsoft's latest release of Windows 10, the Windows 10 Creators Update , was released just over a month ago and brings a host of new features to the table. It unifies the desktop and mobile experiences into a truly one-stop shop for all your work in a single workspace. If you look back over the last three years, the largest ever year-on-year increase in the global digital imaging market has happened thanks to the popularity of smartphone cameras. The tendency towards more intelligent digital photography is now more likely to be a smartphone purchase first, and a camera purchase second. Along with this shift that has occurred, Adobe has been forced to innovate and develop a suite of new tools to help you take advantage of these extra smart features, and provide smooth image editing that complements the photography workflow. The native GPU image adjustments included in Photoshop today are a huge help to photographers creating on the go. You can run all of your RAW processing, including the CMS workflow, with a single click. These tools help you quickly create basic adjustments such as exposure and white balance, as well as for more advanced features

such as white balance, lens correction, and HDR. It's now easier than ever to use camera adjustments within Photoshop. "When our industry's most important tool is 3000 versions behind the game, guess what? That's a problem. Not only does it mean users aren't getting the benefits of the latest features, but we also are missing out on tremendous value opportunities. It's time for Adobe to move to a cloud-first, native-first, GPU-first approach and be more closely aligned with what's happening in other industries like film and the built-up field of augmented reality and virtual reality. If we transitioned over to that new way of working today, what kind of industry would we be building tomorrow? With Adobe Photoshop, we will get to the future faster, more reliable, and more capable of handling the kinds of production environments that our industry will be facing in years to come."
