Now then. The thing with opening the word 'become' in Microsoft Word is that it becomes bigger (and the size of that word is critical to how wow-inducing you make the document look). In the same way, it is vital that your way of looking at your photos be as consistent as possible. As time moves on, and the technology becomes more accessible, the simpler the app pops, the less likely anyone will invest in having a copy of the app on their own system. Facebook Messenger is still using socat . Many use the mate TCPforge TCP/IP forging tool instead, but it's still unusable for system-to-system communication without some kind of proxy or other restriction. There's a new Speed Panels panel in the Develop module that includes a ruler to align your photos, period and strobe histograms to help you see the light in your images (more on this next), and an Exposure tab for judging whether you've got the most accurate exposure. The new Trust tool shows you an overlay of the original image and its copies - you can invert the overlay to check the luminance and color balance of each copy. (Sure, there are apps that do this — but running them on your big computer takes a lot of time and memory.) Trust allows you to quantitatively compare similar areas of multiple copies and determine if copies are accurate or need further improvement. The Magic Wand tool matches pixels of similar color in both images and gets rid of distracting details. You can select a range of photo areas and then refine them. There's a range of sliders for the contrasformation degree and tolerance to perform the Magic Wand; as well as a Dual Mode, which switches back and forth between a alpha channel and color channels, in one pass.

The Lasso tool has two modes - selection and freehand. The basic idea behind selection is helping you isolate an object, while the freehand mode marks out an area. For example, if you have a picture of a plant, you can use the Lasso tool to select the main stem of the plant and move it over to the right. The Clone Stamp tool is perfect for duplicating, editing, and removing objects from an existing image. You can easily erase mistakes completely. This is especially helpful in areas with little detail, making it easy to remove unwanted cells and background areas. The Eraser tool lets you erase accidentally made areas or objects. You can erase parts of an image, leaving a ghostly outline. The Whisk tool lets you erase or hide a pixel so you can blur the image. This is a great way to add blur to a photo. The Screen Space checkerboard is a great way to make sure you have solid colors for your design. Just select your image and size it or use the predefined options, which are 16x16, 32x32, 48x48, 64x64, 96x96, and 128x128. If you need a different size, simply resize the image. This tool is handy when you need to add graphics to your page or ad, but you don't want to use an exact image.
