

## Busy 3 6 Free Download Crack !!BETTER!! For Windowsl

Busy Account Software 3.6 Free is one of the reliable accounting software for small and medium.1. Field of the Invention The present invention relates to a camera system, and more particularly to a camera system adapted to be used outdoors with a camera having a zoom lens. 2. Description of the Prior Art Generally, a camera system has a zoom lens including a plurality of lens groups in order from the object side and a curved lens group arranged therebetween. The lens groups of the zoom lens can be moved for varying the focal length of the lens. In an automatic focusing camera system having such a zoom lens, a distance meter is used to detect the distance between the camera system and the object. An electronic zoom camera system, such as a tape recorder, etc. is capable of recording a picture on a recording medium, such as a magnetic tape, an optical disc, etc. with the zoom lens having a focal length corresponding to a predetermined object distance. However, in the case of an electronic zoom camera system having a zoom lens with a relatively large amount of power for varying the focal length, if the zoom lens is shifted to the telephoto side, the area of the image sensor disposed in the camera system increases, resulting in an increase in the size of the camera system. It should be noted that the above size is increased by an amount corresponding to the area of the image sensor. FIG. 1 is a block diagram illustrating an example of such a camera system of the prior art. Referring to FIG. 1, the camera system comprises a lens driving section 10 for driving the zoom lens of the camera system; a zoom lens driving speed control section 11 for changing the zoom lens driving speed by controlling the lens driving section 10; an image sensor 13 for converting an optical signal transmitted through the zoom lens of the camera system into an electrical signal and is disposed behind the zoom lens, and a zoom lens driving speed control section 11 which controls the zoom lens driving speed of the zoom lens, based upon the results of detecting the distance between the camera system and the object by means of the distance meter. As shown in FIG. 1, the image sensor 13 is of an interlaced type that is capable of converting an optical signal into two image signals. However, in the camera system of the prior art, it is desirable that an electric zoom lens be used for minimizing the size of the camera system. This is because, an optical zoom lens, of which the focal length varies, is large and heavy. On the
