Adobe Photoshop CS5.5 is the latest version of the world's most popular graphics design tool, and it brings a number of new features to the table. For instance, you can add panorama stitching, motion tracking, and a new Content-Aware Fill feature that makes it easier to fill in object details that have been removed. The new Content-Aware Fill feature is a fantastic addition to the software. It enables you to select a specific area of the photo, and then Photoshop will search through the layers of the file to find out 'how' it could have been made. It is a great feature for photographers who are looking to remove objects from a photo.

At this time, however, Photoshop is at its best when it's doing what it was built for: turning photos into works of art, or stories about the world. The company has built a better support for landscape orientation, both for printing and web orientations. This means we are now meaningfully able to create images that will display pleasingly both on a phone and on a computer monitor. Best of all, the Horizon tool now also works better with the Apple Pencil. After all, if Photoshop doesn't work on a tablet, neither does Adobe Reader, another app that has become an essential part of my PC usage. And, it doesn't have to. Adobe told me the next feature slated for Photoshop is the ability to choose a plane to screen your photo on, similar to the Flipswitch feature in Adobe Premiere Pro (and its sibling, After Effects). If the company does follow through, that would be appropriate. That would also be a natural addition to a single app. If it's not that, though, well, I haven't asked. It's hard to develop two-way communication between the user and program. This is why every software bugs. Although it may be just a mechanism to notify you that your photo has been changed, it is not polite.

When Lightroom is in use, Adobe gives you feedback about what actions are available in the Organizer and what's the current state of the catalog. There are two main options: **"Information" and "Direct message".** Lightroom 5 improves an important part of the product: auto-enhance. You know how dark or light areas of a photo look in a dark or light room? Auto-enhance deals with that while leaving skin texture intact. While I may be biased, I think it is the best version so far. I am happy that the controls are very user-friendly and you can always customize them.

What It Does: Instead of using fill color, it lets you choose a portion of an image as your background. You can choose a number of options to bring out a color or object in your image. **What It Is:** Using the eraser tool you can remove anything that doesn't belong in your image. You can even resize your image to make it fit your creation. If you use your finger to drag, you can create a pinch effect on your image. Adobe Photoshop Lightroom Classic CC is a full-featured photo management software program that lets you organize, touch up and share your pictures. It does this in a remarkably intuitive interface that gives you control over your images while making it extremely easy to view, copy and share them. You can also use the program's device-aware photo editing tools to automatically fix red eyes, craters, and other imperfections. Lightroom also has tools to help create great-looking, professional-quality images from your existing photos. Over the last three years, Chrome has been working to empower web applications that want to push the boundaries of what's possible in the browser. One such web application has been Photoshop. The idea of running software as complex as Photoshop directly in the browser would have been hard to imagine just a few years ago. However, by using various new web technologies, Adobe has now brought a public beta of Photoshop to the web. AI has great potential to support and empower designers. AI could enable designers to create human-like visualizations in life forms (whale, falcon, dolphin, and dove come to mind), and it might even be able to solve the problem where keyboards don't fit things. That's exciting stuff. Of course, designers, AI enthusiasts and experts have a lot to think about before AI replaces humans. "When Adobe engineers asked what they really wanted from Photoshop, collaborative editing was always high up on the list," said Schmidlin. "With the release of Share for Review last fall, we wanted to provide Photoshop CC users with a streamlined way to collaborate and quickly turn thoughts into color-matched layouts and concepts." "Designers have preached the value of collaboration for years, but for Photoshop, it's come to fruition with Share for Review," said Leonard Lipton, CEO of Fusion. "Share for Review allows our team to work together to quickly voice dissent and style ideas without being tethered to a screen. The ability to navigate off-screen is especially useful when working with large file sizes and multiple collaborators as it eliminates the need to leave Photoshop to view and simultaneously visualize inspiration." "We're thrilled to support Share for Review in Photoshop Creative Cloud as we continue to push the boundaries with Skylum's Fusion Color," said Kees Huissoon, CEO of Skylum. "Gone are the days where users needed to own expensive hardware to edit color or run an expensive conference. Now even the most novice photographer can quickly share colors, ideas and feedback with their partners to deliver extraordinary results." "Photoshop is one of the most versatile tools on the market, but its unwieldy options, bus-load of settings and lack of visual collaboration can get in the way of users, whether they're designers, teachers or students," said Kai Roewer, senior product marketing manager, Photoshop Creative Cloud. "With Share for Review, we've erased Photoshop's former boundaries and opened up the platform by allowing users to quickly and easily share ideas and feedback. No longer do users have to leave the app to talk about edits, enabling them to collaborate on project designs, and stay in the creative flow."
